

COMPANY PROFILE

Emmepi S.R.L. was founded in 1981 thanks to the entrepreneurial intuition of Primo Mutti and his significant experience on strapping machines.

The company has been operating in the corrugated cardboard area for over thirty years. It produces strapping machines for boxes and sheets both in bales and on pallets.

As a small-scale company reality at the beginning, thanks to the strong will to improve and further develop existing products on the market, Emmepi modified its structure and organization over time to design and manufacture strapping and joggers machines in Dresano (Milan-Italy).

Our mission is to manufacture machines that will last and meet all customer needs and support the most modern and safe technologies for their operation and for those who use them.

Our machines use components supplied by the worldwide main companies. They are versatile, fast, robust, safe and meet the customer's expectations.

We are present on the five continents, with technical assistance facilities and spare parts warehouses.

Thousands of machines are installed worldwide and distributed by a widespread network of agents, demonstrating and certifying our concrete results.

Moreover, Emmepi founded the Emmepi Group, which provides turn-key systems for all logistics, packaging and production flow that requires the corrugated cardboard area, representing an absolute innovation in the market as a single company responsible for management.

The Group consists of a team of companies that manufacture automated handling and centering systems, rotating roller conveyors, loaders, palletizers, stacker cleaners with suction conveyance, pallet inserters, a wide range of wrapping machines and accessory equipment for the corrugators and casemakers.
